

Gareth - Software Engineer

C# | .NET | AWS

<https://github.com/gareth-britannic> ☆ Remote since 2014 🇬🇧 British National

SUMMARY

Senior software engineer with extensive experience delivering cloud-native applications, distributed systems and SaaS platforms.

Experienced designing multi-tenant platforms, APIs, microservices and reusable application capabilities, with recent work incorporating AI-assisted and agentic software engineering workflows.

PROFESSIONAL EXPERIENCE

Software Engineering Consultant

Britannic AI Limited

📅 2025 - Present 📍 London, United Kingdom

Founded the company and built a production SaaS hospitality platform end to end, architecture, cloud infrastructure, security and delivery from concept to production. Consult through the same company on an established commercial platform for an external client.

- Built reusable SaaS platform capabilities: identity, multi-tenancy, licensing, audit, observability, and AI governance.
- Introduced AI-assisted engineering workflows using OpenAI Codex and Cursor, specification-driven development, automated code review, acceptance checks, and human approval gates on Git and deployment.
- Designed platform boundaries separating reusable shared capabilities from product-specific business logic, supporting multiple B2B and consumer products.
- Established the cloud infrastructure for a production SaaS platform from scratch: environment configuration, containerised deployment with Docker, CI/CD pipelines, and security.

Senior Engineer

Xero 📅 2022 - 2025 📍 Singapore - Melbourne based team

Delivered cloud-native microservices using C# and ASP.NET Core within a distributed, event-driven architecture.

- Implemented event-driven communication using SNS/SQS messaging patterns.
- Built AWS-based services using Lambda, SNS/SQS, RDS (PostgreSQL), and DynamoDB.
- Managed infrastructure using Terraform with structured environment separation.
- Implemented CI/CD pipelines using GitHub Actions to automate build, test, and deployment.
- Applied TDD practices (xUnit, Moq) to improve maintainability and release confidence.
- Contributed to high-availability backend services supporting a large SME accounting user base.

CORE TECHNICAL EXPERTISE

Languages & Frameworks

C# .NET Core TypeScript
.NET 9 ASP.NET Core Web API
Entity Framework Core

Cloud & DevOps

AWS AWS ECS AWS Lambda
AWS SNS AWS SQS AWS RDS
AWS DynamoDB AWS S3
AWS CloudFront AWS IAM
Terraform CloudFormation Docker
GitHub Actions

Data & Messaging

PostgreSQL SQL Server DynamoDB
Redis

Artificial Intelligence

Codex Cursor Claude Code

Testing & Quality

xUnit Moq FluentAssertions
TDD Peer Review FluentValidation

Architecture

Microservices Event-Driven Systems
REST APIs Distributed Systems

Observability

NewRelic Serilog

PROFESSIONAL EXPERIENCE

Senior Software Developer

Sportradar 📅 2020 - 2022 📍 London, United Kingdom

Rebuilt a client's on-premise legacy monolith into containerised microservices using C# and .NET Core within an AWS ECS-based architecture.

- Implemented event-driven communication using SNS/SQS messaging patterns.
- Mapped undocumented business rules across the legacy system to establish service boundaries before migration.
- Developed RESTful APIs supporting high-throughput sports data systems.
- Refactored performance-critical modules to improve efficiency and reduce latency.
- Built reusable service components adopted across multiple projects.
- Introduced structured TDD practices (xUnit, Moq) improving release confidence.

Software Developer

Pepper Money UK 📅 2019 - 2020 📍 Cardiff, United Kingdom

Delivered a web-based secured loan application and case management system for a UK lender, working within a Scrum team.

- Built transactional microservices in C# using Web API and WCF services over SQL Server.
- Developed the Angular front end for the case management workflow.

Software Engineer

Newfold Digital 📅 2017 - 2019 📍 Cardiff, United Kingdom

Re-engineered a monolithic web application into loosely coupled microservices using ASP.NET Core and REST APIs.

- Developed a .NET Core ETL engine using serverless functions and a managed NoSQL document store to support scalable data ingestion.
- Designed data abstraction layers enabling migration to NoSQL backends.
- Implemented Redis caching strategies to improve performance and reduce database load.
- Built and maintained backend services using C#, SQL Server, and cloud platform services.
- Contributed to architectural redesign improving scalability and resilience.

Earlier Experience

📅 2012 - 2017

- Year in industry at PlanTask Limited (2012 - 2013), retained part-time through my final year (2013-2014), then joined CGI's graduate programme on graduation (2014 - 2017). Delivered enterprise applications using C#, ASP.NET and SQL Server.

EDUCATION

B.Sc. (Hons) Computer Science (2:1)

Cardiff University / Prifysgol Caerdydd 📅 2010 - 2014
